## Design: 'Stroll'

### Design: Senator in-house

Designed by the Senator in-house design and development team in conjunction with Paul Brooks. Senator has achieved great success with high performance task seating over the years, which has provided a wealth of experience and understanding of market needs and task chair functions across different market levels.

### Features:

As an extremely competitively priced product the 'Stroll' task chair is packed full of features and style. Apart from its distinctive back handle, the backrest features a sliding adjustable lumbar support within a fixed back, as opposed to a height adjustable back. In addition to this the slender, shapely, yet generous seat cushion thickness and curvaceous ergonomic upholstered shapes maximise the excellent comfort levels provided by this design and add to its visual appeal. The comfort is further enhanced by the flexible and articulating backrest, which is a permanent contact type of back, however, one that feels more like a fully synchronised mechanism, by way of its excellent progressive pivoting contact performance. The height adjustable armrest, seat height adjustment and five-star base are all common to those used on the Dash chair. All in all it's as easy to use and enjoy, as a walk in the park!

The gas assisted, glass reinforced injection moulded plastic backrest yoke is an example of the innovative use of inexpensive materials with high structural integrity and reliability that enhance the value and performance of this design.

The sensible location of the chairs' seat height and back recline controls integrated into the seat, provide ease of adjustment. The tension control is conveniently located at the side of the chair with a 'soft touch' knob, incorporating a 'safety clutch' to prevent damage to the adjustment mechanism.

The slim and elegant optional armrest has a soft armrest pad and height adjustment is operated by a trigger under the armrest.

'Stroll' has been designed in consideration of European norms and includes a number of key ergonomic adjustments, and the option of arm height adjustment. Through the clarity and simplicity of this chairs' functionality and performance, 'Stroll' is another task chair in our collection that exudes common sense with all that's required from an operator chair for today, but at a highly affordable price point.

This is a chair to rival any competitor at this level of the market where performance, design and value go hand in hand.

### Finishes:

The injection moulded chair parts are all available in black as standard. The cast aluminium 5-star chair base can be polished or painted. Black castors are used with the polished Ali base, while black rimmed castors with a silver grey hub are provided with a black plastic base. Arm pads and support stems are only offered in black. Upholstery is available in the usual broad range of fabrics and leather.

### Products available in range

**Marketplace:**

'Stroll' is the ideal chair for the high volume mass market where value and performance are a necessity, but where more complex chairs are not required. It will appeal to a host of potential users from call centres and high street retailers to banks and other similar corporate institutions. This is clearly a stylish task chair, but is very much about performance with style at a great price.

**Bullet points:**

- Designed for simplicity of use with understated style.
- Very competitively priced, high performance.
- Highly developed pivot point geometry creates a progressive contact movement for the user with lockable in 3 positions reclining through 18 degrees. The addition of a flexible pivotal joint ensures the back flexes additionally through 6 degrees with the movement of the body continuously.
- Optional arms height adjustable through 100mm – NOTE width adjustment not available
- NOTE: Seat Depth adjustment is not available on 'Stroll'
- Innovative use of inexpensive materials with structural integrity and reliability.
- Sensibly located levers.
- Ease of adjustment.
- Tension can be adjusted via a side tension adjuster for easy use with a 'safety clutch' to prevent damage to the mechanism if over tightened.
- Slender shapely, yet generous upholstery providing excellent comfort.
- Clear, simple functionality and performance.
- A chair to rival any competitor in the mass market.
- Painted or polished 5-star base.
- Black armrest support and soft pad.
- Stroll is stylish, but is not about image, it's about performance with style at a great price.
