## Design: 'Task Two'

### Designer: Senator in-house

Senator in-house design and development team is one from a mixture of design, engineering and production backgrounds. As well as working successfully in developing the ideas of freelance furniture designers, the department's acquired market knowledge has also led to a number of highly successful in-house designs.

### Features:

Task 2 is a traditional series of task seating and visitor chairs with numerous variants. This excellent range comes with a choice of 2 mechanisms, 2 backrest heights, optional seat depth adjustment (50mm), and fixed or height adjustable armrests, plus cantilever chairs with or without armrests. The backrest is fully adjustable for height and angle as standard except on the cantilever models. The optional independent mechanism has a multi-function seat adjustment enabling the seat and back to be moved independently of each other with the ability to lock both in a fixed position, while the backrest can be independently height adjusted. The swivel models all have gas lift seat height adjustment. All of these adjustments and options are designed to provide the optimum comfort and function whilst at work.

### Finishes:

Black injection moulded nylon 5-star base as standard, with silver or polished aluminium options. RAL9011 black finish to all plastic parts and cantilever frames as standard, with chrome plated cantilever frame option. Upholstery is available in a wide range of fabrics or leather.

### Marketplace:

Task 2 is a popular favourite and has been specified for a wide range of customer projects and environments for some years now. It is particularly suited to work intensive applications where support is required for long periods of sit and is extremely competitively priced.

### Products available in range

**V260**  
No arms  
Medium height back  
Standard seat width  
Standard mechanism

Dimensions:  
Seat 450-560h 480w 450d
